HTTPS / SSL	✓ Pass	URL Structure	✓ Pass	Internal Links	✓ Pass
Viewport Meta	✓ Pass	Word Count	✓ Pass	Image Dimensions	✓ Pass

3 critical issues and 7 warnings require attention. Resolve critical items first for maximum ranking impact.

CRITICAL — FIX IMMEDIATELY (3)

- 1

Page Size

Technical

784 KB (HTML document)

Action: Reduce HTML size by: minifying HTML/CSS/JS, removing inline styles/scripts, cleaning up unused code, and server-side rendering only what's needed. Target under 100 KB.
- 2

Text-to-HTML Ratio

Content

7% (text vs total HTML)

Action: Improve content density: remove unnecessary HTML markup, reduce inline styles, clean up commented-out code, and add more visible text content. A ratio below 10% often indicates thin or code-heavy pages.
- 3

Image Alt Text

Links & Media

18 of 112 images missing alt text

Action: 18 image(s) are missing alt text. Add descriptive alt attributes: ``. Include target keywords where relevant. Use `alt=""` only for purely decorative images (icons, spacers).

WARNINGS — ADDRESS NEXT (7)

- 4

Page Title

On-Page SEO

"Hair Transplant & Hair Loss Treatment Clinic in Perth & Brisbane" (64 chars)

Recommendation: Title is too long (64 chars). Trim to under 60 characters — Google truncates longer titles in search results.
- 5

Meta Description

On-Page SEO

"Discover expert hair loss solutions at Evolved Hair. Offering advanced treatment..." (132 chars)

Recommendation: Description is too short. Expand to 150–160 chars — include your keyword and a compelling reason to click.
- 6

H1 Tag

On-Page SEO

2 H1 tags found — use exactly one

Recommendation: You have 2 H1 tags. Keep only one — convert the others to `<h2>` or `<h3>` tags. Multiple H1s dilute keyword relevance.
- 7

Heading Hierarchy

On-Page SEO

H1: 2 · H2: 70 · H3: 58

Recommendation: Structure your headings in order: one H1 (page title), multiple H2s (main sections), H3s (subsections). Never skip levels (e.g. H1 → H3). Include secondary keywords in H2 tags.
- 8

Page Load Time

Technical

2245.5 ms (server response time)

Recommendation: Optimise server response time: enable GZIP compression, use a CDN, optimise images (convert to WebP), minify CSS/JS, enable browser caching, and consider upgrading hosting. Target under 1000ms.
- 9

Open Graph Tags

Social & Schema

og:title ✓ og:description ✓ og:image ✗

Recommendation: Add complete Open Graph tags inside `<head>`:

```
<meta property="og:title" content="Your Title">
<meta property="og:description" content="150–160 char description">
<meta property="og:image" content="https://yourdomain.com/image.jpg"> (min 1200×630px)
<meta property="og:url" content="https://yourdomain.com/page">
<meta property="og:type" content="website">
```
- 10

OG Image

Social & Schema

og:image not set

Recommendation: Add `<meta property="og:image" content="URL">` with an image of at least 1200×630 pixels. Use a branded image that represents the page content. Recommended: PNG or JPG under 1 MB.

Want us to implement every fix in this report?

Our SEO specialists resolve every issue above, build a full content & backlink strategy, and get your site ranking — fast.
